

**Assignment-4** Working for an organization, you are required to provide them a safe and secure environment for the deployment of their resources. They might require different types of connectivity. Implement the following to fulfil the requirements of the company.

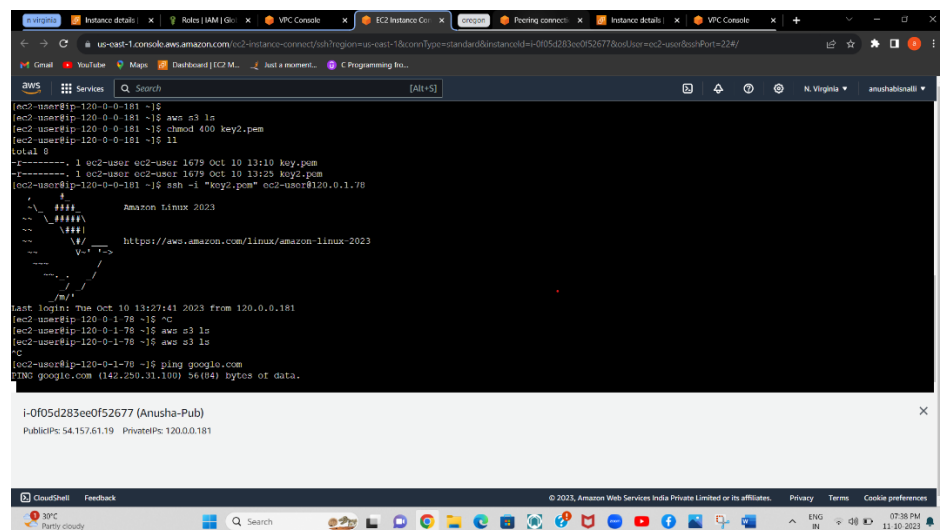

### Step 1: create IAM role & polices to access to S3 bucket

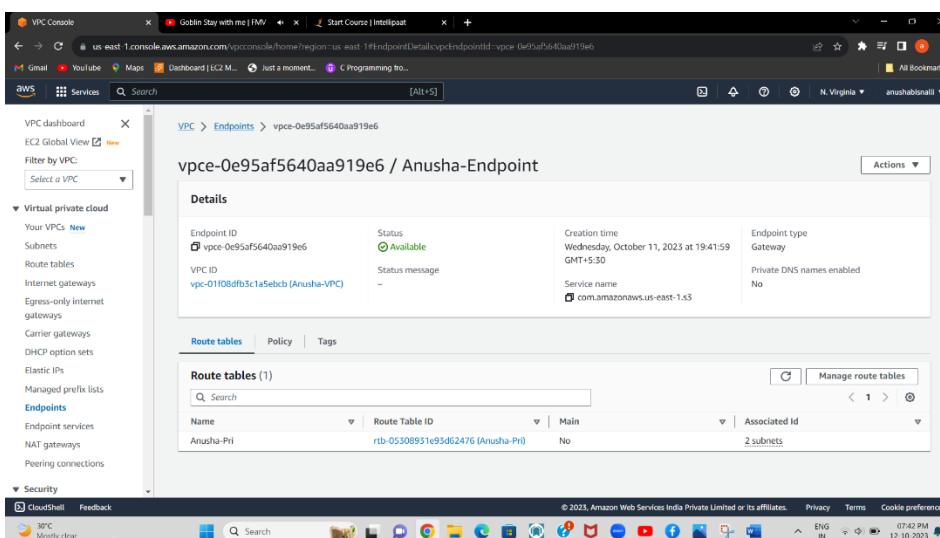

### Step 2: Attach to public & private instances

**Step 3: Run `aws s3 ls` command from both instances it is listing bucket**

**Step 4: Remove NAT Gateway from private subnet run command no longer access to internet & s3**

**Step 5: Create End points**

**Step 6:** run aws ls it will list bucket but no access to internet
